IsSelected property Another approach is to convert the xml file to a more compatible data type for a checkbox.

For example, you can add a IsSelected entry Then you can bind IsChecked property to IsSelected, and you can handle the business logic in the code behind.. It will introduce a new problem that a property change in this class will not trigger the ConverBack method since the object itself haven't changed.. The following information is an example of what I want to archiveThe XML template is used to define the WPF UI element (in this example they're CheckBoxes)The ItemsControl in XAML is used to automatically generating the Layout for the WPF UI based on the XML templateSo what should I doIt is not recommended to involve too much business logic in a converter.. Then you can use relative source to bind CheckBox Checked property to ListBoxItem.. Please remember to click “Mark as Answer” on the post that helps you, and to click “Unmark as Answer” if a marked post does not actually answer your question.

Hope this helps Please feel free to let me know if you still have any doubts or concerns about this issue.. It will introduce a new problem that a property change in this class will not trigger the ConverBack method since the object itself haven't changed.. So you will also need to manully raise propertychange events However, I don't think it is a good way to go. [Kyno For Mac](#)
